TransCanada Orders Three AW119 Ke Helicopters

AgustaWestland, a Finmeccanica company, is pleased to announce that TransCanada's ANR Pipeline Company, has ordered a total of three AW119s plus options to support offshore operations in the Gulf of Mexico. ANR Pipeline will be taking delivery of the first two AW119 Ke single engine helicopters later this summer with the third aircraft following in 2010.

The ANR Pipeline Company operates one of the largest interstate natural gas pipelines in the United States, covering approximately 10,600 miles and delivering more than 1 trillion cubic feet of natural gas annually. The AW119s is ideally suited to support ANR's operations, providing unmatched performance and capability compared to any other helicopter in the single engine market. The helicopter's excellent speed, range, cabin room and payload, provide ANR with a cost effective solution for its operations in demanding environments.

In recent years, AgustaWestland's market share in North America has increased tremendously with strong sales of its entire range of commercial helicopters. Over 190 helicopters including both the A119 Koala and AW119 Ke have been ordered to date in nearly 30 countries by almost 90 customers. The AW119 is perfectly suited to perform offshore transport and other various roles such as law enforcement, EMS, VIP/corporate transport, utility, firefighting and military operations.
